Research & Outreach  
New Hampshire State Director

### **Steve Westcott**

Director of IT/Neon

### **Debbie Pike**

Wellness Coordinator

### **Scott Jennie**

Director of Internal Training  
California State Director

In partnership with the Firefighter Cancer Support Network (FCSN), the IAFF has designated January as Firefighter Cancer Awareness Month to provide firefighters the necessary tools and guidance to develop life-saving protocols for cancer prevention within their departments. In addition, bringing increased public awareness to occupational cancer in the fire service will help generate greater legislative support for states and provinces to establish a presumptive disability for cancer.

Firefighter occupational cancer is the leading cause of line-of-duty deaths in the fire service. At the 2022 IAFF Fallen Fire Fighter Memorial, almost 75% of the names added to the wall (348 out of 469) were members who had died from occupational cancer. Firefighter occupational cancer is the leading cause of line-of-duty deaths in the fire service.

There are six training modules in the program, one for each week of the month to use as education on the occupational cancer problem and steps one can take to reduce their exposure to cancer causing toxicants.

The training modules are a good discussion tool for firefighters to help educate themselves on reducing the risk of occupational cancer.

The five training modules are:

1. Scope of the cancer problem
2. Scientific research related to occupational cancer
3. Cancer prevention
4. Survivorship
5. The need for culture change
6. Occupational Cancer in Female Firefighters

When using these modules, it is recommended to do so in presenter mode in PowerPoint to capture the instructor notes for the slides.

**Make the necessary changes in regards to occupational cancer.  
Together, we can make a difference!**
